

Control retrofit

Our Know How – your advantages

- Easy and quick retrofit
- Proven, self-optimised process flow
- User-friendly control
- Detailed reports and trend displays at the user panel
- Optional data communication
- Ideal connection to Bucher NetService

Retrofit – a control retrofit that pays off!

Change the existing control of your Bucher press and plant for a modernised control system and extend in this way the trouble-free operation duration.

We upgrade the control of your press or by using up-to-date technology and extend it with process-optimised monitoring, evaluation and output functions. Only electronic and control components with high reliability and long availability are used. In this way we achieve that the press is reaching

the expected capacity and contributing to your success.

The user interface at the panel and the data handling comply after a retrofit with those of a new press. Bucher SCADA can be used for data capturing and for the central control of all Bucher presses in a unified way; for retrofitted and also for new presses.

Contact us. We will be gladly available for consulting you personally about your advantages of a control retrofit and will create an order perfectly tailored for your plant.

Technical specifications

Control:	SIMATIC S7-1500
User interface:	Siemens Comfort Touch Panel TP1200
