

Reconnection Lantern

Automatic Unit

For safe beverage
transfer

- Efficient air removal
- Minimizes extract losses
- Instant reconnection
from empty to selected tank
- Controlled beer flow
to minimize oxygen pickup

Principle

The Deaeration Lantern safely transfers beer from cellar to filter, or BBT to filling line and removes air automatically with very high efficiency. Flowing through the lantern, air bubbles are released from beer and vented out by pneumatic valve.

When a source tank slowly becomes empty, flow of beer is automatically reduced minimizing air pickup. Once the tank is empty, the lantern automatically reconnects to the next full tank. This way several tanks can be connected and being emptied at the same time without a danger, that some of the tanks become empty and let gas into the beer stream.

The modular layout is expandable from two to eight lanterns. The system comes assembled on a compact frame, is tested and rapidly put into operation.
